## Overall Comments

The year 2015 marked the thirteenth writings of the Fryer, Galois and Hypatia Contests. The FGH Contests are designed to give students in Grades 9, 10 and 11 an additional mathematical challenge during the school year, and one that requires full written solutions. Being able to do mathematics is an important skill; being able to communicate one's findings (in mathematics or in any other field) is also very important.

We were very pleased this year to see another healthy increase in the number of participants in these Contests. In general, many students writing these Contests are doing a better job each year of writing clear solutions to the problems. That being said, there is always work that can be done to help them improve these skills. Some students reduced their scores because they gave answers rather than solutions or presented untidy or illegible solutions.

The averages on the Fryer, Galois and Hypatia Contests this year were 27.2, 23.3 and 21.0, respectively. We will continue to try to keep the averages on these papers in this range. Here are some specific comments on the problems.

## Fryer Contest

### 1. Average: 8.9

Overall, the problem was very well done. In part (a), many students did not give an exact answer, but instead gave approximations ranging between  $5024 \text{ cm}^3$  and  $5029 \text{ cm}^3$ . No marks were deducted for giving approximations in that range. A common error in part (c) was using the radius of the cylinder (rather than its diameter) to find the dimensions of the box.

### 2. Average: 8.4

Parts (a) and (b) were extremely well done. In part (c), the common struggle for students was setting up an equation that included the values of quarters and dimes. In other words, students who forgot to consider the values of the coins usually solved the equation  $x + (2x + 3) = 10.65$ .

### 3. Average: 6.3

Part (a) was extremely well done. Students had very little trouble using the given formula correctly. Part (b) was also done well. The majority of students were able to identify that you could find the required sum by finding the difference between the sum of the first 200 positive integers and the sum of the first 150 positive integers or by pairing integers to produce 25 pairs each with a sum of 351. In part (c), students had little trouble finding the sum of the first 1000 positive integers, but many struggled to calculate the sum  $3 + 6 + 9 + \dots + 993 + 996 + 999$ . If students did not realize that they could remove the common factor of 3 and use the given formula, little progress was made. Another common error was assuming that the sum of  $3 + 6 + 9 + \dots + 993 + 996 + 999$  equals one-third of the sum of the first 1000 positive integers.

### 4. Average: 3.5

Almost all students who attempted part (a) correctly stated that a minimum of 8 steps are required to get to hexagon  $A$  from the starting token. In part (b), almost all students were able to identify that a maximum of 11 steps are required to get to  $A$ , but very few students were able to provide adequate justification as to why the maximum is 11 steps. To receive full marks, students needed to identify that token  $A$  is 11 rows above the starting token or that taking a step up the token moves up two rows, while taking a step to the left or right only moves the token up one row. Part (c) was clearly the hardest question on this year's Fryer Contest. Many students misunderstood what part (c) was asking, completely ignoring the criteria asking them to find the different hexagons that could be reached "in at least 20 different ways" and instead found all the hexagons that could be reached in exactly 5 steps in any number of ways. Students who took into account this condition ("in at least 20 different ways") usually broke the possible routes into cases and enumerated the paths for each case. Very few students approached the problem by carefully looking at the hexagons that can be reached in exactly 1 step, then using those hexagons to find the hexagons that can be reached in exactly 2 steps, continuing to build on the information from before until reaching 5 steps.

**Galois Contest**

## 1. Average: 8.5

This question was well done. The most common type of mistake was a substitution error, particularly in part (b).

## 2. Average: 7.5

Parts (a), (b) and (c) were generally well done, with some students making mistakes by not reading the question carefully. Part (d) caused more problems as students struggled with what the question was asking and how to best work with the resulting inequalities.

## 3. Average: 4.3

Part (a) was well done. Part (b) was a mix of excellent solutions and incomplete solutions, where some students either missed one of the general cases or more students used specific examples rather than general parity arguments. Part (c) caused some problems but many students did well. In part (d), students who considered parity seemed to get 4 or 7 answers with some getting all 11. Many students did not use parity but created a chart based on  $m + 1$  being smaller than  $2n + m$  and then considering all such factors of 9000. With care, this approach worked well.

## 4. Average: 2.9

Part (a) was done well. In part (b), many students rotated the triangle inside the square which when turning the diagram back to the "base" position each time is correct. A number of students did miscount by having the triangle go back to its original position (8 moves) rather than to where it first touched the vertex (7 moves). The argument from part (b) was often used to get a total of 24 moves in part (c), but then only a few students deduced the alternating sequence of angles of angles of rotation, very few determined the radii of the rotations, and fewer still obtained the correct answer.

**Hypatia Contest**

## 1. Average: 9.0

This question was well done. In (c), the train has a portion in both countries from the time its head crosses the border until the time its tail crosses the border, a total of exactly 165 s. For full marks, students must have made a statement that the length of time is 165 s. A number of students did their arithmetic correctly but interpreted the time that the train is in both countries as something slightly less than 165 s. Another common error was dividing the answer by 2 to get 82.5 s.

## 2. Average: 6.2

Part (a) was generally well done. A common error was giving  $AB = 80$ . Although  $AB - BA = 80 - 08 = 72$ , the question required that  $B$  be a non-zero digit. In part (b), a number of solutions were possible, including an analysis of the ones (units) digit or the tens digit of  $MN - NM$  and the maximum possible values of  $MN - NM$ . Explanations involving whether  $M - N = \frac{80}{9}$  needed to explain that  $M - N$  is an integer while  $\frac{80}{9}$  is not an integer. In part (c), a common error was to list possible values for  $P, Q, R$  and the corresponding numbers  $PQR$  and  $RQP$  without adjusting for the fact that distinct combinations of  $P, Q, R$  will yield the same result for  $PQR - RQP$ .

## 3. Average: 4.6

In part (a), a common error was adding lines to the diagram for  $T(4)$  and  $T(5)$  but missing some of the additional intersection points. Beyond part (a), few students used the graphical context to lead or check their answers, treating it merely as an algebraic exercise using the values from (a). If students had a mistake in (a), their results in the later parts would be significantly off-track. While part (b) could be done by counting the intersection points added just by drawing an  $n$ th line, many students solved this by finding the closed formula  $T(n) = 2n + \frac{n(n-1)}{2}$ , and subtracting the corresponding formula for  $T(n-1)$ . Another

common approach was to write  $T(n) - T(n-1) = \binom{n}{2} - \binom{n-1}{2} + 2$ . In part (c), students who solved the quadratic as  $n = 62$  or  $n = -65$  needed to state that the value of  $n$  must be positive. Some students generated values for  $T(1), T(2), T(3), \dots$  until they found that  $T(62) = 2015$ . Since the question asked for all possible values of  $n$  such that  $T(n) = 2015$ , for full marks students must justify that there are no other solutions by explicitly stating that the sequence is increasing.

4. Average: 1.3

In part (a), a common error was to recognize the factors of 125 as 1,5,25,125 but to miscount how many numbers from 1 to 125 fell into which category. Another common error was to claim that  $P(125) = P(25)P(5)$ . Since  $\gcd(25, 5) \neq 1$ , this technique is not valid. In part (b), students needed to justify that  $P(r^2s) = P(r^2)P(s)$  since  $\gcd(r^2, s) = 1$ . They needed to justify why  $P(s) = 2s-1$  and why  $P(r^2) = r(3r-2)$ . Some students claimed that  $P(r^2s) = P(r)P(r)P(s)$ , but this is not correct since  $\gcd(r, r) \neq 1$ .

**Please visit our website at [cemc.uwaterloo.ca](http://cemc.uwaterloo.ca) to download the 2015 Fryer, Galois and Hypatia Contests, plus full solutions.**

### Commentaires généraux

L'année 2015 est la treizième édition des concours Fryer, Galois et Hypatie. Les concours de FGH ont été créés pour donner aux étudiants de 9e, 10e et 11e année (sec. III, IV et V) un défi mathématique supplémentaire pendant l'année scolaire qui exige des solutions écrites complètes. Être capable de faire des mathématiques est une aptitude importante. Pouvoir communiquer ses conclusions (en mathématiques ou autres domaines) est aussi très important.

Nous sommes ravis cette année de constater une croissance du nombre de participants à ces concours. En général, plusieurs des étudiants participant à ces concours s'améliorent d'année en année en ce qui concerne écrire des solutions claires. Cependant, il y a toujours du travail à faire pour les aider à développer leurs aptitudes. Certains des étudiants ont eu des notes plus basses car ils présentaient uniquement des réponses au lieu de solutions ou des solutions non soignées ou illisibles.

Cette année, les moyennes des concours Fryer, Galois et Hypatie étaient de 27,2, 23,3 et 21,0 respectivement. Nous tenterons de continuer à conserver cette gamme pour les moyennes de ces examens. Voici quelques commentaires spécifiques sur les problèmes de ces examens.

### Concours Fryer

#### 1. Moyenne: 8,9

Ce problème a été très bien réussi. Dans la partie (a), bon nombre d'élèves ont donné une réponse approximative, entre  $5024 \text{ cm}^3$  et  $5029 \text{ cm}^3$ , au lieu d'une réponse exacte. On a attribué tous les points pour une réponse dans cet intervalle. Dans la partie (c), l'erreur la plus commune provenait de l'utilisation du rayon des cylindres, au lieu du diamètre, pour calculer les dimensions de la boîte.

#### 2. Moyenne: 8,4

Les parties (a) et (b) ont été très bien réussies. Dans la partie (c), bon nombre d'élèves ont éprouvé de la difficulté à créer une équation comprenant la valeur des pièces de 10 ¢ et de 25 ¢. Ils utilisaient souvent, à tort, l'équation  $x + (2x + 3) = 10,65$ .

#### 3. Moyenne: 6,3

La partie (a) a été très bien réussie. Les élèves n'ont éprouvé aucune difficulté à utiliser correctement la formule donnée. De même, la partie (b) a été bien réussie. La plupart des élèves ont vu qu'on pouvait déterminer la somme en soustrayant la somme des entiers de 1 à 150 de la somme des entiers de 1 à 200 ou en appariant les termes deux à deux pour obtenir 25 paires de nombres ayant chacune une somme de 351. Dans la partie (c), les élèves n'ont éprouvé aucune difficulté à obtenir la somme des 1000 premiers entiers strictement positifs, mais bon nombre d'entre eux n'ont pas réussi à calculer la somme de  $3 + 6 + 9 + \dots + 993 + 996 + 999$ . Pour réussir, il fallait factoriser 3 de chaque terme et utiliser la formule pour la somme de 1 à 333. Bon nombre d'élèves croyaient, à tort, que la somme de  $3 + 6 + 9 + \dots + 993 + 996 + 999$  est égale à un tiers de la somme des entiers de 1 à 1000.

#### 4. Moyenne: 3,5

La plupart des élèves qui ont entrepris de résoudre la partie (a) ont réussi à trouver qu'il fallait au moins 8 étapes pour déplacer le jeton jusqu'à l'hexagone A. Dans la partie (b), la plupart des élèves ont réussi à déterminer qu'il fallait un maximum de 11 étapes pour déplacer le jeton jusqu'à l'hexagone A, mais très peu d'entre eux ont réussi à justifier pourquoi. Pour recevoir le maximum de points, il fallait dire que l'hexagone A est situé à 11 rangées au-dessus de l'hexagone de départ ou qu'en déplaçant le jeton vers le haut, celui-ci montait de 2 rangées, tandis qu'en le déplaçant vers la gauche ou vers la droite, le jeton montait d'une rangée. La partie (c) était évidemment la question la plus difficile du concours. Bon nombre d'élèves n'ont pas compris ce qui était demandé, en ignorant le critère qui demandait le nombre d'hexagones qui pouvaient être atteints « d'au moins 20 façons différentes » et en déterminant plutôt le nombre d'hexagones qui pouvaient être atteints en 5 étapes de n'importe combien de façons. Ceux qui ont tenu compte du critère ont généralement examiné divers cas et ont énuméré les chemins pour chaque cas. Très peu d'élèves ont examiné les hexagones qui pouvaient être atteints en 1 étape, puis ceux qui pouvaient être atteints en 2 étapes et en utilisant les renseignements obtenus pour se rendre à 5 étapes.

**Concours Galois**

1. Moyenne: 8,5

Ce problème a été bien réussi. L'erreur la plus commune était une erreur de substitution, surtout dans la partie (b).

2. Moyenne: 7,5

Les parties (a), (b) et (c) ont été plutôt bien réussies. Certains élèves n'ont pas bien lu les renseignements donnés, ce qui a coûté des points. La partie (d) a causé des difficultés, les élèves ne semblant pas bien comprendre ce que l'on demandait ou comment s'y prendre pour résoudre le problème.

3. Moyenne: 4,3

La partie (a) a été bien réussie. Dans la partie (b), on a vu des solutions excellentes ainsi que des tentatives incomplètes basées sur des cas particuliers au lieu d'arguments basés sur la parité. La partie (c) semble avoir été difficile pour certains, mais beaucoup d'élèves l'ont réussie. Dans la partie (d), les élèves qui ont discuté de parité ont généralement obtenu 4 ou 7 couples au lieu de 11. Bon nombre d'élèves n'ont pas fait appel à la parité et ont utilisé un tableau dans lequel  $m + 1$  est inférieur à  $2n + m$  et en considérant toutes les paires de facteurs de 9000. Cette approche fonctionnait bien si on procédait avec soin.

4. Moyenne: 2,9

La partie (a) a été bien réussie. Dans la partie (b), bon nombre d'élèves ont fait tourner le triangle à l'intérieur du carré. Cette approche était correcte. Certains élèves ont mal compté en replaçant le triangle dans sa position de départ (8 manoeuvres) au lieu de la position dans laquelle un de ses sommets touche le sommet  $D$  (7 manoeuvres). Bon nombre d'élèves ont utilisé l'argument de la partie (b) pour obtenir 24 manoeuvres dans la partie (c), mais peu d'entre eux ont observé la suite alternante des angles de rotation, très peu d'entre eux ont calculé les rayons de rotations et encore moins ont obtenu la bonne réponse.

**Concours Hypatie**

1. Moyenne: 9,0

La question a été bien réussie. Dans la partie (c), une partie du train se trouve dans chaque pays à partir du moment où la locomotive arrive à la frontière jusqu'au moment où l'arrière du train quitte la frontière, soit pendant 165 s. Pour obtenir le maximum de points, il fallait un énoncé indiquant que cela avait pris 165 s. Certains élèves ont tout bien calculé, tout en affirmant que le train avait pris un peu moins de 165 s. D'autres ont divisé par 2 pour obtenir 82,5 s.

2. Moyenne: 6,2

La partie (a) a été plutôt bien réussie. Bon nombre d'élèves ont donné  $AB = 80$  comme réponse. Bien que  $AB - BA = 80 - 08 = 72$ , la question stipulait que  $B$  était un chiffre non nul. Dans la partie (b), il y avait plusieurs démonstrations possibles, y compris une analyse des chiffres des unités ou des dizaines de l'expression  $MN - NM$  et le nombre maximal de valeurs possibles de  $MN - NM$ . Les explications sur la possibilité que  $M - N$  soit égal à  $\frac{80}{9}$  devaient tenir compte du fait que  $M - N$  est un entier, mais que  $\frac{80}{9}$  n'est pas un entier. Dans la partie (c), un bon nombre d'élèves ont présenté les valeurs possibles de  $P, Q, R$ , ainsi que les nombres  $PQR$  et  $RQP$ , sans tenir compte du fait que certaines combinaisons distinctes de  $P, Q, R$  donnent une même valeur de  $PQR - RQP$ .

3. Moyenne: 4,6

Dans la partie (a), certains élèves ont ajouté des segments de droites pour calculer  $T(4)$  et  $T(5)$  tout en omettant certains points d'intersection. Après la partie (a), peu d'élèves ont utilisé l'aspect géométrique pour vérifier leur travail ou comme inspiration. Ils ont plutôt traité le travail comme un calcul algébrique à partir des valeurs de la partie (a). Une erreur dans la partie (a) pouvait entraîner des erreurs majeures plus loin. On pouvait résoudre la partie (b) en comptant les points d'intersection supplémentaires après l'ajout du

$n^{\text{ième}}$  segment, mais bon nombre d'élèves ont utilisé  $T(n) = 2n + \frac{n(n-1)}{2}$ , tout en soustrayant l'expression correspondante pour  $T(n-1)$ . D'autres ont utilisé  $T(n) - T(n-1) = \binom{n}{2} - \binom{n-1}{2} + 2$ . Dans la partie (c), les élèves qui ont résolu l'équation du second degré pour obtenir  $n = 62$  ou  $n = -65$  devaient indiquer que la valeur de  $n$  doit être positive. Certains ont généré les valeurs successives de  $T(1), T(2), T(3), \dots$  jusqu'à celle de  $T(62) = 2015$ . Puisque la question demandait toutes les valeurs de  $n$  pour lesquelles  $T(n) = 2015$ , ces élèves devaient justifier qu'il n'y avait aucune autre valeur de  $n$  en indiquant clairement que la suite était croissante.

#### 4. Moyenne: 1,3

Dans la partie (a), bon nombre d'élèves ont reconnu que les diviseurs de 125 sont 1, 5, 25 et 125, tout en commettant des erreurs quant aux nombres des valeurs de  $a$  pour lesquelles  $PGCD(a, 125)$  est égal à 1, 5, 25 ou 125. Bon nombre d'élèves ont affirmé, à tort, que  $P(125) = P(25)P(5)$ . Puisque  $PGCD(25, 5) \neq 1$ , cette égalité n'est pas vraie. Dans la partie (b), les élèves devaient justifier que  $P(r^2s) = P(r^2)P(s)$  puisque  $PGCD(r^2, s) = 1$ . Ils devaient justifier pourquoi  $P(s) = 2s - 1$  et pourquoi  $P(r^2) = r(3r - 2)$ . Certains élèves ont affirmé que  $P(r^2s) = P(r)P(r)P(s)$ , mais l'égalité n'est pas vraie, puisque  $PGCD(r, r) \neq 1$ .
