## Computer Science Part 1 - Problem Set

1. Determine the values of each of the variables and their data types after the following code is run.

$$
\begin{aligned}
& a=17 \\
& b=5.0 \\
& c=b-a \\
& d=b * c \\
& e=(a \quad!=d) \\
& f=\operatorname{not}(\operatorname{not}(e)) \\
& g=e \text { and } \operatorname{not}(f) \\
& b=d
\end{aligned}
$$

2. Let $a=25, b=4$ and $c=9$. Determine the following.
(a) $a+b-c$
(b) $a^{*}(c / b)$
(c) $\left(b^{* *} b\right)+(9 / / 4)$
(d) $(a \% b)-\left(a^{*} b^{*} c\right)$
3. Let $a=3, b=-8, c=3.0$ and $d=0$. Determine the following.
(a) $\operatorname{not}(a==c)$
(b) $(b<=c)$ and $(d>b)$
(c) $\operatorname{not}((a!=b)$ or $(d==0))$
4. The volume of a rectangular prism is determined by multiplying the length, width and height of the rectangular prism by each other. Write a program called rec_prism_volume that inputs the length, width and height of a rectangular prism, and outputs the volume of the rectangular prism.
5. There are approximately 1.609344 kilometres in a mile. Write two programs:

- km_to_miles, inputs a distance in kilometres and outputs the equivalent distance in miles
- miles_to_km, inputs a distance in miles and outputs the equivalent distance in kilometres Use these two programs to make the following conversions. Round to 4 decimal places.
(a) 1 km to miles
(b) 10 miles to km
(c) 120 km to miles
(d) 54.0592937 miles to km

## Bonus Questions

6. Suppose a person writes code that prints the sum of any two inputted numbers. Their code is shown below, but it contains an error. Determine if it is a syntax error or a semantic error, and specify where it occurs. How could this code be fixed? (Hint: Run it through Python Tutor).
```
num1 = input('Enter a number:')
num2 = input('Enter another number:')
sum = num1 + num2
print('The sum of', num1, 'and', num2, 'is', sum)
```

7. The following code contains a total of 3 syntax errors. Identify each of them.

$$
\begin{aligned}
& a==\operatorname{input}(\text { "Enter } a \text { number:") } \\
& b=\operatorname{int}(a) \\
& c=a+b \\
& a=\operatorname{int}(a) \\
& d=0 \\
& e=a / d
\end{aligned}
$$
