

# Problem of the Week

## Problem A

### Walking With Walden

Lindsay takes her dog Walden for a walk every day.

- On Monday she took him for a 45 minute walk.
- On Tuesday, they walked for 5 minutes longer than on Monday.
- On Wednesday, they walked for half as much time as Tuesday.
- On Thursday, they walked for 10 minutes less than Monday.
- On Friday, they walked for 15 minutes more than Thursday.
- On Saturday, they walked for twice as long as Monday.

- A) How many minutes did Lindsay spend walking Walden between Monday and Saturday?
- B) Lindsay wants to make sure that Walden is getting enough exercise. How long must Walden's walk be on Sunday to guarantee he walks for at least 6 hours this week?
