

Problem of the Week

Problem B

In an Orderly Fashion

- a) When we write the year 2021, we are writing two consecutive two-digit numbers (20 and 21). Find all the other years from 1000 to 2021 that are made up of two consecutive two-digit numbers written in order, and add them to the table below.
- b) Find the sum of the consecutive two-digit numbers for each year from part a), and add this to the table below. For example, for 2021, the sum is $20 + 21 = 41$. Describe the pattern formed by these sums.
- c) Find the product of the consecutive two-digit numbers for each of the first 5 years in the table. Then find the differences of these products, in order. For example, $10 \times 11 = 110$ and $11 \times 12 = 132$. The difference is $132 - 110 = 22$.
You will have five products and four differences.
- (i) What pattern is formed by the differences?
(ii) Use this pattern to find the remaining products, without multiplying.
- d) What sequence of numbers can you form by combining the numbers in the sum column and the difference column?

Year	Sum	Product	Difference
1011	$10 + 11 = 21$	$10 \times 11 = 110$	—
1112	$11 + 12 = 23$	$11 \times 12 = 132$	$132 - 110 = 22$
2021	$20 + 21 = 41$	$20 \times 21 = 420$
