

Problem of the Week

Problem A

Snow Days

Tapeesa monitored the amount of snowfall each day, Monday through Sunday, for four weeks. Here is what she recorded:

- The first week it snowed 5 mm each day.
- The second week snow only fell on two days: 8 cm of snow fell on Tuesday and 2 cm of snow fell on Friday.
- It did not snow the third week at all.
- A total of half a metre of snow fell during the last week.

What was the total amount of snowfall over the four weeks?
