Problem of the Week
Problem A
Balancing Act

Robbie is in charge of sending out boxes from a distribution centre. The contents of the boxes are identified by shapes stamped on them: a heart, a moon, or a sun. All boxes with the same stamp have the same mass.

The following diagrams show what Robbie observed when arranging some of the boxes and standard weights on a scale.

![Diagram of balances with shapes and weights]

Given that each scale is balanced, determine the mass of each box.
